

Problem-Solution fit canvas 2.0

Route every IT support ticket to the right team automatically, so issues are fixed faster with less manual effort.

Define CS, fit into CC

1. CUSTOMER SEGMENT(S)

Who is your customer?
i.e. working parents of 0-5 y.o. kids

- Employees who raise IT incidents in the organization
- Service desk agents who triage and resolve tickets
- Support group managers and ServiceNow administrators

CS

6. CUSTOMER CONSTRAINTS

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

- Limited agent time and a growing number of tickets
- Tickets must be classified from the short description the user types
- The solution must work inside ServiceNow and use the existing support groups

CC

5. AVAILABLE SOLUTIONS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

- Manual triage by service desk agents. Pros: human judgement. Cons: slow, inconsistent, often misrouted
- Employees pick the category themselves. Pros: no agent effort. Cons: often the wrong category
- Basic assignment rules without Flow Designer. Pros: simple. Cons: limited logic, harder to maintain

AS

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

- Get an IT issue reported and fixed quickly (employee)
- Classify and route each ticket to the right group without manual effort (agent)
- Reduce misrouted and unassigned tickets (support manager)

J&P

9. PROBLEM ROOT CAUSE

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

- Tickets are classified and assigned by hand
- Users describe the same problem in different ways and choose the wrong category
- No automatic rules read the ticket details when the incident is created

RC

7. BEHAVIOUR

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits;
indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

- Employees raise the issue on the Service Portal and describe it in a few words
- Agents read each new ticket, set the category and priority, and assign it by hand
- Agents reassign tickets that landed in the wrong group
- Employees follow up to ask for the status of their ticket

BE

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

- An employee's device or software stops working and blocks their work
- A new incident is created in ServiceNow
- A ticket stays unassigned or misrouted for too long

TR

4. EMOTIONS: BEFORE / AFTER

How do customers feel when they face a problem or a job and afterwards?
i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

- Before: frustrated and unsure the ticket reached the right team
- After: confident and in control; the ticket is routed and they are notified

EM

10. YOUR SOLUTION

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

- A Flow Designer flow starts when an incident is created
- It reads the category and short description and sets the category and priority from keywords
- It assigns the incident to the matching support group
- Email notifications go to the caller and the assignee
- Low-confidence tickets go to a manual review queue; unassigned tickets are escalated after a set time
- A dashboard shows tickets by category and status

SL

8. CHANNELS of BEHAVIOUR

8.1 ONLINE

- What kind of actions do customers take online? Extract online channels from #7
- Raise incidents on the ServiceNow Service Portal or mobile app
- Receive email notifications and check ticket status online

8.2 OFFLINE

What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

- Call or visit the service desk to report an issue
- Ask a colleague which team to contact
