

Auto Ticket Classification using Flow Designer

Customer Journey Map Team ID: SWTID-2026-3677

SCENARIO Raising, classifying, assigning and resolving an IT incident in ServiceNow											
	Entice		Enter		Engage			Exit		Extend	
	How does someone initially become aware of this process?		What do people experience as they begin the process?		In the core moments in the process, what happens?			What do people typically experience as the process finishes?		What happens after the experience is over?	
Steps	Face an IT issue The employee's laptop, VPN or software stops working		Open the Service Portal The employee goes to the ServiceNow Service Portal to report the issue		Fill in the incident form The employee enters a short description and details of the problem		Submit the incident The employee submits the form and gets an incident number		Flow classifies the ticket Flow Designer reads the category and short description and sets category and priority		Ticket is assigned The flow assigns the incident to the matching support group
Interactions	Own laptop or phone; may ask a colleague		Service Portal in a web browser or the ServiceNow mobile app		Incident form on the Service Portal		Portal confirmation screen and email		Flow Designer flow; runs automatically with no person involved		Service desk agent in ServiceNow; may contact the employee for details
Goals & motivations	Help me get my work back on track		Help me find where to report the issue		Help me describe the problem easily		Help me know my ticket was received		Help me get my ticket sorted correctly without delay		Help me get the issue fixed quickly
Positive moments			The Service Portal is one place to report any issue				The incident number is reassuring		Tickets are classified automatically, with no manual triage		Tickets go straight to the right group
Negative moments	Work is blocked and the employee is stressed				Not sure which category to pick				Without automation, tickets are classified by hand and often misrouted		Tickets in the wrong group get passed around
Areas of opportunity			Add a search or catalog so employees find the right form quickly		Suggest a category while the employee types				Send low-confidence tickets to a manual review queue		Balance workload across agents in the group
							Escalate tickets left unassigned after a set time				Add a quick feedback link to the resolved email
											Show a dashboard of tickets by category and status
											Review misclassified tickets regularly to refine the rules
