

Project Design Phase-II Data Flow Diagram & User Stories

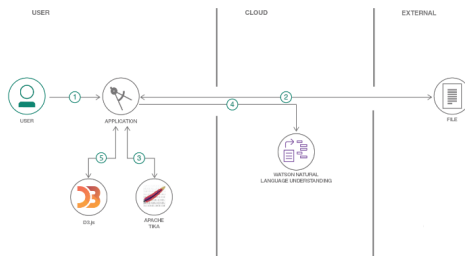

Date	31 January 2025
Team ID	SWTID-2026-3677
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

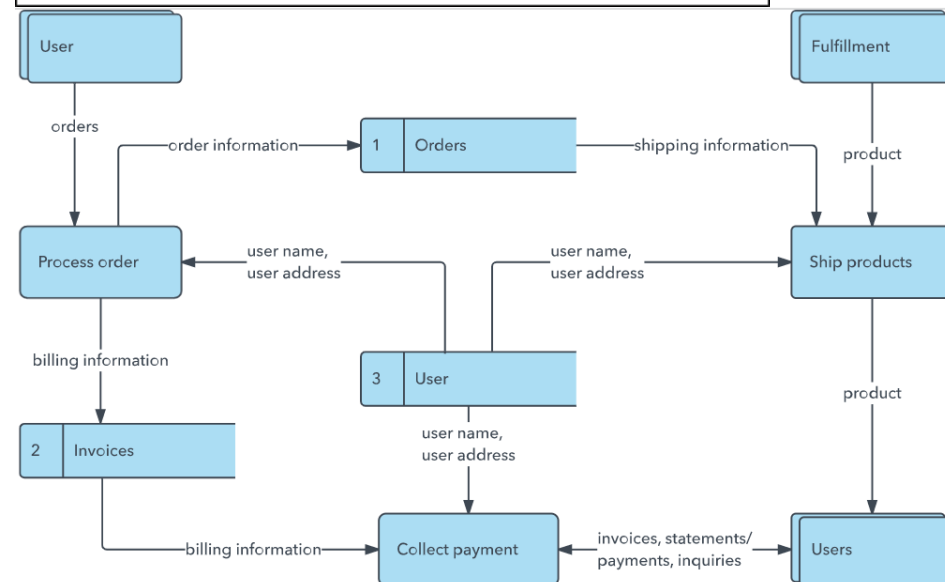

Example: (Simplified)

Flow

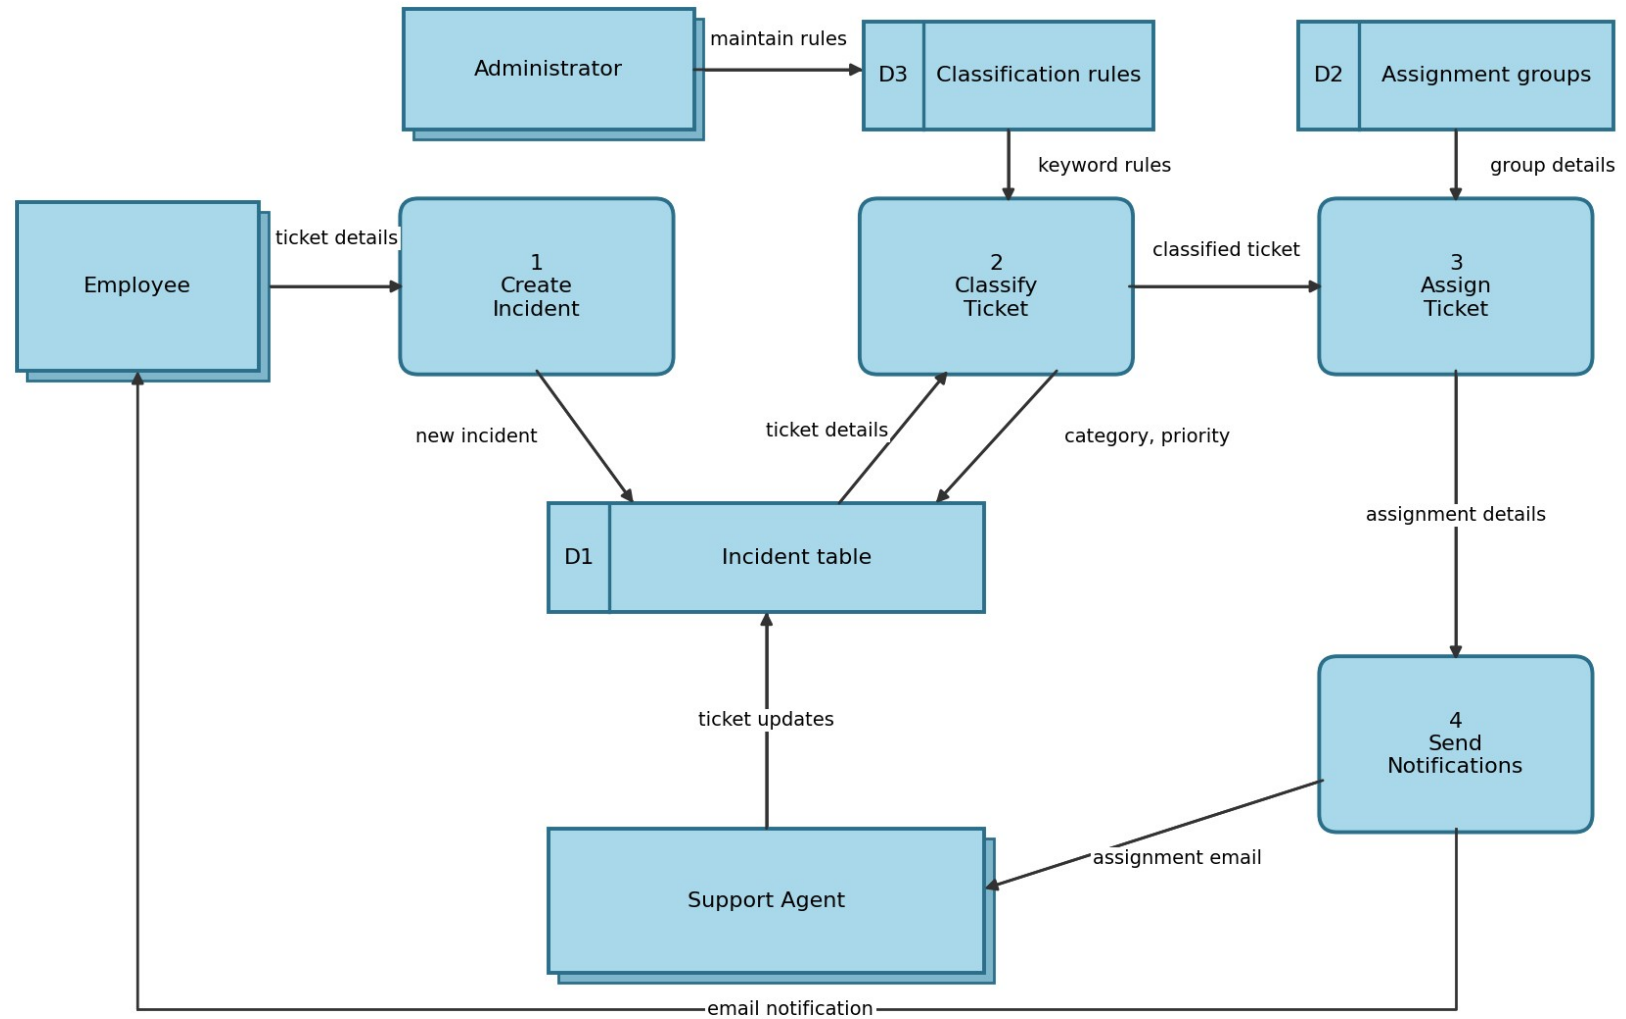

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

Example: DFD Level 0 (Industry Standard)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Employee (Mobile user)	Ticket Creation	USN-1	As an employee, I can raise an incident from the ServiceNow mobile app by entering a short description	I can submit the incident and see its number	High	Sprint-1
		USN-2	As an employee, I will receive an email once my incident is created and assigned	I receive an email with the incident number and assigned group	Medium	Sprint-2
Employee (Web user)	Ticket Creation	USN-3	As an employee, I can raise an incident through the Service Portal form	The incident is saved and appears in my ticket list	High	Sprint-1
	Ticket Tracking	USN-4	As an employee, I can view the status of my incidents	I can see the category, assignment group and state	Medium	Sprint-2
Service Desk Agent	Ticket Classification	USN-5	As an agent, I want tickets to be categorized automatically from the short description	Category and priority are set when the incident is created	High	Sprint-1
	Ticket Assignment	USN-6	As an agent, I want tickets to be assigned automatically to the right support group	The incident shows the matching assignment group	High	Sprint-1
	Manual Review	USN-7	As an agent, I can review tickets that could not be classified and correct them	Unclassified tickets appear in a review queue and my changes are saved	Medium	Sprint-2
Administrator	Flow Configuration	USN-8	As an administrator, I can maintain classification keywords and rules in Flow Designer	Updated rules apply to new incidents	High	Sprint-1
	Reporting	USN-9	As an administrator, I can view a dashboard of tickets by category and status	The dashboard shows ticket counts by category and status	Low	Sprint-2
	Escalation	USN-10	As an administrator, I want tickets left unassigned to be escalated after a set time	An escalation notification is sent for unassigned tickets	Medium	Sprint-2
