

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	SWTID-2026-3677
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Creation	Incident creation through Service Portal form Incident creation through email
FR-2	Ticket Classification	Flow Designer reads category and short description Category and priority set from keywords
FR-3	Ticket Assignment	Automatic assignment to the matching support group Escalation of tickets left unassigned after a set time
FR-4	Notification and Tracking	Email notification to the caller and assignee Dashboard of tickets by category and status

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple Service Portal form; classification happens automatically without extra effort from the user
NFR-2	Security	Role-based access control (ACLs) so only authorized users can view and update tickets
NFR-3	Reliability	The flow runs on every new ticket; tickets it cannot classify go to a manual review queue
NFR-4	Performance	Tickets are classified and assigned automatically as soon as they are created
NFR-5	Availability	Hosted on the ServiceNow cloud, so the service stays available to users
NFR-6	Scalability	New categories and assignment rules can be added in Flow Designer as ticket volume grows
